Primate Diet

Canned

Feeding Instructions

ZuPreem® Marmoset Diet is formulated to be fed as the basic diet for primates, such as Capuchins, Woolly Monkeys, Squirrel Monkeys, Gibbons, Rhesus Monkeys and others. A supplemental diet source of Vitamin C, such as 1/4 to 1 orange per day, depending on the size of the animal, must be fed in addition to this ZuPreem diet. Any other nutritional supplement(s) may upset the balance of this diet.

Feed ZuPreem Primate Diet free choice to non-obese prone animals. Otherwise feed measured meal quantities. Most primates will consume approximately 1 can of ZuPreem Primate Diet per 30-35 lbs. of body weight daily. The correct quantity fed is one that maintains an appropriate body weight. Food consumption may vary between species and individuals of the same species. If necessary, ZuPreem Primate Diet may be introduced by mixing with the present diet in increasing proportions until it is the sole diet being fed. ZuPreem also makes Primate Dry Monkey Biscuits.

Cover and refrigerate the unused portion. Best if served at or slightly above body temperature.
